Project Details:

Project Title: Joey's Conservation Program: Stream Keepers

Project Type: Stream Research and Restoration

Affiliate: Steady Stream Hydrology, Inc.

Project Location: Sheridan County, Wyoming

Project Description: We are requesting funding for our conservation program, Stream Keepers. In this program, Joey's participants will engage in stream-related activities through mentorship to become stewards of river systems. They will team together in an effort to observe current river conditions, learning river behaviors and restoring them to their natural state. In addition to observing these key physical components of the river, participants will partake in ecological classes pertaining aquatic entomology, hydrology, floodplain connectivity and animal habitat.

Project Problem: Through the conservation program at Joey's, participants will observe the behavior of the different stages of stream health thereby determining how to assess and help the environment. Learning these aspects will give the participants problem-solving skills related to the outdoors and their habitat.

Problem Solution: Objectives: 1. Utilize river box kits to educate participants on healthy vs unhealthy rivers and the plant/animal life within them 2. Participation in riverbank cleanups to clean up garbage during which observation of healthy vs unhealthy stream areas will be documented 3. Discuss and design action plan to restore the unhealthy river 4. Take action to care for the river as stewards and maintain long term sustainability

Biography Of Applicant:

Name: Joey Puetzman

Address: 109 S. Main St. Ste. B

City: Sheridan

State: WY

Zip: 82801

Phone: 3077630897

Fax:
